Can solar energy systems decarbonize oil refineries?

Other studies in the literature considered coupling solar energy systems to oil refineries to decarbonize their operation. The applicability and feasibility of introducing a concentrated solar power (CSP) system to reduce partial reliance on process heaters of a crude oil refinery was studied by Danish et al. .

Can solar energy drive crude oil refineries?

Employing solar energy to drive crude oil refineries is one of the investigated pathways for using renewable energy sources to support lowering the carbon emissions and environmental impact of operating the processing of fossil-based fuels.

Can a TRNSYS solar heating system be used in a refinery?

Using TRNSYS software, the proposed Parabolic Trough Collector (PTC)-based solar heating system paired with the boiler is modelled. Sensible thermal energy storage (TES) system is integrated into the refinery's process heating to handle the intermittent nature of solar energy.

Can solar thermal energy be used for crude oil heating?

The system's energy and exergy efficiencies were determined to be 60.94 and 19.34%, respectively. In addition, a 10% solar contribution to crude oil heating reduces 11,950 tonnes of CO₂ annually. These investigations demonstrate that the utilization of solar thermal energy using a parabolic trough collector is one of the most efficient methods.

Siemens Solar has pioneered this unexpected yet transformative application, deploying photovoltaic (PV) systems to power remote oil fields, pipelines, and refineries.

Siemens Solar has pioneered this unexpected yet transformative application, deploying photovoltaic (PV) systems to power ...

The West Africa Container Terminal (WACT) has signed a significant Solar Lease Agreement with Starsight Energy, to provide an expected 1.2-Gigawatt hours of solar ...

WACT is the first greenfield container terminal built under a Public-Private Partnership model in Nigeria. Strategically located within ...

With an experienced R& D team, we are able to design and manufacture solar power pods with superior performance and cost-effectiveness according to the specific needs of our customers.

WACT is the first greenfield container terminal built under a Public-Private Partnership model in Nigeria. Strategically located within the Oil and Gas Free Zone in Onne ...

The present study investigates the feasibility of solar hybrid system to generate steam in the oil refinery to maintain the temperature of heavy crude oil products before ...

Ouagadougou storage power cabinet compressed air solar container power generation principle The system works without external heat sources, and utilizes an air compressor, a ...

The West Africa Container Terminal (WACT) has signed a solar lease agreement with a pan-African clean energy company to provide at least 1.2GW hours of electricity each ...

This paper proposes a solar-assisted method for a petrochemical refinery, considering hydrogen production deployed in Yanbu, Saudi Arabia, as a case study to ...

THE west Africa Container Terminal (WACT) has signed a Solar Lease Agreement with Starsight Energy to provide an estimated 1.2 gigawatt hours (GWh) of solar power per year over a 15 ...
