-----

This paper proposes a novel hydraulic energy storage component (NHESC) that integrates hybrid energy storage through the use of compressed air and electric energy. The ...

This study proposes four novel DVAs using a hydraulic amplifier (HA) to address the limitations of traditional lever mechanisms and a mechanical inerter to improve the ...

Herein, research achievements in hydraulic compressed air energy storage technology are reviewed. The operating principle and performance of this technology applied ...

The self-tuning hydraulic vibration energy absorption device and method are suitable in applications of high speed, precision, light load and small or medium energy level.

This paper proposes a novel hydraulic energy storage component (NHESC) that integrates hybrid energy storage through the ...

The invention relates to an energy storage suspension device with vibration energy recovery, which belongs to the technical field of automobile energy saving and emission reduction.

A hydraulic vibration damping and energy storage device technology, which is applied in the direction of shock absorber, spring/shock absorber ...

A vibratory energy-recycling hydraulic damping system is introduced which includes four vibration dampers, one energy accumulator, one storage tank and some hydraulic components.

A hydraulic vibration damping and energy storage device technology, which is applied in the direction of

shock absorber, spring/shock absorber design features, vibration suppression ...

Hydraulic circuits often experience sudden pressure spikes that can damage valves, seals, and other sensitive components. Accumulators absorb these shocks, protecting ...

To solve the excessive vibration of an energy storage flywheel rotor under complex operating conditions, an optimization design method used to the energy storage ...
