What are the new energy conservation standards for external power supplies?

The U.S. Department of Energy (DOE) has recently proposed new energy conservation standards for External Power Supplies (EPSs). These proposed standards, known as Trial Standard Level 4 (TSL4), aim to tighten energy efficiency requirements across all types of EPSs. TSLs are a tool used by the DOE to set energy conservation benchmarks.

What are the minimum energy performance standards for external power supplies?

The Minimum Energy Performance Standards for external power supplies are: for products with AC outputs -- the requirements mentioned in Clause 2.2 of AS/NZS 4665.2:2005 (Average Active Mode Efficiency). For more information, see subsection 7 (1) of the Determination. To be registered as a 'high efficiency' product, a power supply must meet either:

What are external power supplies?

See Regulated products for details about past consultations, related materials and next steps. External power supplies are also called power adaptors, plug-packs or power packs. They are used to recharge or power products such as laptops, mobile phones, modems, printers, and other extra low voltage products both fixed and portable.

What are the labeling requirements for external power supplies?

Labeling requirements will be mandated to meet the same International Efficiency Marking Protocol for External Power Supplies Version 3.0 as the previous Level V standard. Globally, it is expected that other nations will soon follow suit with the DoE Level VI standard.

Below is the DRAFT 4 product specification for ENERGY STAR qualified single voltage external ac-dc and ac-ac power supplies. A product must meet all of the identified criteria if it is to be ...

Website: <https://whitecoraloffshore.online>

With the publication in 2014 of a new set of requirements by the United States Department of Energy (DoE) that went into effect in February 2016, the landscape has changed again as ...

Manufacturers have been required to comply with the U.S. Department of Energy (DOE) energy conservation standards for external power supplies ...

This document, concerning external power supplies is an action issued by the Department of Energy. Though it is not intended or expected, should any discrepancy occur ...

Ecodesign is expected to substantially improve the energy efficiency of external power supplies. The new regulation of 2019 is expected to achieve additional energy savings of around 5 ...

Currently, external power supplies that meet the definition of a "Class A" external power supply are required to meet specific energy conservation standards articulated at 10 CFR ...

To be eligible for ENERGY STAR qualification, an external power supply model must meet or exceed a minimum average efficiency for Active Mode, which varies based on the model's ...

The U.S. Department of Energy (DOE) has recently proposed new energy conservation standards for External Power Supplies (EPSs). These proposed standards, ...

For lower AC line voltages such as the 3-phase, 208 V standard found in North America, an external step-down transformer is required. Refer to Application Note 102 for guidance on ...

Manufacturers have been required to comply with the U.S. Department of Energy (DOE) energy conservation standards for external power supplies since 2007.

The U.S. Department of Energy (DOE) has recently proposed new energy conservation standards for External Power Supplies (EPSs). ...

For technical requirements regarding external power supplies, including testing requirements and Minimum Energy Performance Standards, review the relevant Determination and standards. ...
