---

This standard specifies the product types, technical requirements, and test methods of inverters used in photovoltaic (Pv) grid-tied systems. This standard is applicable to photovoltaic grid ...

NB/T 32004 is an important industry standard in photovoltaic industry, which is one of the standards that grid-connected inverters must meet in domestic market, as well as the ...

Efficiency, cost, size, power quality, control robustness and accuracy, and grid coding requirements are among the features highlighted. Nine international regulations are ...

The goal of this work is to accelerate the development of interconnection and interoperability requirements to take advantage of new and emerging distributed energy ...

The goal of this work is to accelerate the development of interconnection and interoperability requirements to take advantage of ...

Step 1: Add NB/T 32004-2018 to Cart -> Step 2: Go to Cart -> Step 3: Go to Pay -> Step 4: Get NB/T 32004-2018 via email in 1~5 business day

This paper aims to select the optimum inverter size for large-scale PV power plants grid-connected based on the optimum combination between PV array and inverter, among several ...

This standard specifies the product types, technical requirements and test methods for photovoltaic grid-connected inverters used in photovoltaic (PV) power generation systems.

NB/T 32004-2013 "Technical Specifications for Grid-Connected Inverters for Photovoltaic Power Generation" was issued by the National Energy Administration and is under the jurisdiction of ...

This standard specifies the product types, technical requirements and test ...

This standard applies to photovoltaic grid-connected inverters connected to the PV source circuit whose voltage does not exceed 1500V DC and whose AC output voltage does not exceed ...
