What is a liquid cooling Battery Cabinet?

At the heart of this revolution lies a critical piece of engineering: the Liquid Cooling Battery Cabinet. This technology is not just an accessory but a fundamental component ensuring the safety, longevity, and peak performance of modern energy storage solutions, moving us toward a more efficient and secure energy future.

Why do battery cells have a smaller temperature difference with liquid cooling?

Therefore, battery cells will have a smaller temperature difference with liquid cooling. Without fans on battery modules for air cooling means no noise emission from battery modules. Cooling liquid powered by the pump will circulate inside battery modules and take the heat from batteries.

What is a 5MWh liquid-cooling energy storage system?

The 5MWh liquid-cooling energy storage system comprises cells, BMS, a 20'GP container, thermal management system, firefighting system, bus unit, power distribution unit, wiring harness, and more. And, the container offers a protective capability and serves as a transportable workspace for equipment operation.

How does an energy storage inverter work?

Energy Storage Inverter: Each battery compartment connects to a 2500kW-PCS, enabling bidirectional energy conversion between the battery system and the grid. The battery compartment employs a 20'GP non-standard container measuring 6058mm×2550mm×2896mm, housing a total of 12 battery clusters, resulting in a total system capacity of 5.016MWh.
