Which battery raw materials have experienced significant price fluctuations over the past 5 years?

Battery raw materials like lithium carbonate (Li_2CO_3), lithium hydroxide (LiOH), nickel (Ni) and cobalt (Co) have experienced significant price fluctuations over the past five years. Figures 1 and 2 show the development of material spot prices between 2018 and 2023.

What is Fastmarkets' battery raw materials suite?

Fastmarkets' battery raw materials suite brings together the vital commercial insights, data and analytics that you need to help you make accurate forecasts, manage inventories and price risk, benchmark costs against your peers' and balance the costs and benefits of sustainability.

Why should you invest in Fastmarkets battery raw materials?

Fastmarkets' battery raw materials products give market participants and investors the transparency and clarity to make critical and strategic business decisions. Trade on market-reflective prices. Validate your price, supply and demand forecasts for 1-2 years in the future. Access critical long-term forecasts for the next 10-15 years.

What factors influence the price of battery materials?

The materials under investigation are predominantly used in the battery value chain, so that the dynamics are essentially shaped by battery demand and the expansion of production capacities for materials. Their price therefore particularly reflects market factors such as supply and demand fluctuations.

With the nickel market in flux as new supply comes online, market participants and investors need clarity and insights into what's ahead. Get the latest nickel news and analysis from our expert ...

Recent projects show flow battery prices dancing between \$300-\$600/kWh installed. Compare that to lithium-ion's \$150-\$200/kWh sticker price, but wait--there's a plot twist.
