OverviewModern systemComponentsOther systemsCosts and economyRegulationLimitationsGrid-connected photovoltaic systemA photovoltaic system, also called a PV system or solar power system, is an electric power

system designed to supply usable solar power by means of photovoltaics. It consists of an arrangement of several components, including solar panels to absorb and convert sunlight into electricity, a solar inverter to convert the output from direct to alternating current, as well as mounting, cabling, and other electrical accessories to set up a working system. Many utility-scale PV systems use tracking systems
