---

If the future is the result of a call to `async` that used lazy evaluation, this function returns immediately without waiting. The behavior is undefined if `valid ()` is false before the call ...

Checks if the future refers to a shared state. This is the case only for futures that were not default-constructed or moved from (i.e. returned by `std::promise::get_future ()`), ...

In 2025, mobile solar container systems will offer a lower off-grid cost, making them more affordable than ever. They are also more practical and efficient compared to diesel ...

Unlike `std::future`, which is only moveable (so only one instance can refer to any particular asynchronous result), `std::shared_future` is copyable and multiple shared future ...

Wondering what a solar container system costs? Explore real-world price ranges, components, and examples to understand what ...

Since C++11, `std::future` now has both a `wait()` and a `get()` method, which will wait until the future has a valid response, with the latter method waiting (blocking) and then ...

If the future is the result of a call to `std::async` that used lazy evaluation, this function returns immediately without waiting. This function may block for longer than ...

Explore market trends, pricing, and applications for solar energy storage containers through 2025. Learn about key cost drivers, ...

Wondering what a solar container system costs? Explore real-world price ranges, components, and examples to understand what impacts total cost--and if it's worth the ...

Let's examine key factors: cost dynamics, return on investment (ROI), real-world applications, risks, and how the 2025 market landscape supports (or complicates) such an ...

The class template `std::future` provides a mechanism to access the result of asynchronous operations: An asynchronous operation (created via `std::async`, ...

A future represents the result of an asynchronous operation, and can have two states: uncompleted or completed. Most likely, as you aren't doing this just for fun, you actually ...

Below is an exploration of solar container price ranges, showing how configuration choices capacity, battery size, folding mechanism, and smart controls drive costs. Prices span ...

Solar container market was valued at \$220.0 million in 2024 and is projected to reach \$2,148.3 million by 2035, growing at a CAGR of 23.0% during the forecast period (2025-2035).

The `get` member function waits (by calling `wait()`) until the shared state is ready, then retrieves the value stored in the shared state (if any). Right after calling this function, `valid` ...

By component, the batteries segment is projected to grow at a CAGR of 26.9% during the forecast period. By power capacity, the 10-50 KW segment is expected to hold a share of 42.9% of the ...
