Why is there no unified framework for battery storage?

While amendments to the Renewable Energy Act introduced the Feed-in Premium to encourage renewable integration, no unified framework exists for battery storage. Project developers cite uncertainty around licensing, grid access, and fire safety rules--raising both compliance costs and risk premiums. Urban density further compounds the problem.

Is energy storage a key component of energy infrastructure systems?

While energy storage has traditionally been a key component of energy infrastructure systems in developed energy markets, the technological developments of the coming century give rise to a new set of demands for technological flexibility and sophistication, as well as a new scale at which energy storage technology will be needed.

Should generation be treated as consumption or a new asset class?

Should be treated as "generation" rather than as consumption or a new asset class. This is important for a number of reasons including unbundling (see below), the appli

With its updated energy storage policy, Japan aims to achieve 45% renewable electricity by 2030 while solving the ultimate puzzle: how to store sunshine and wind like ...

By 2025, Japan's energy storage scale is projected to skyrocket, driven by renewable energy adoption and post-Fukushima reforms. Let's unpack how this tech-savvy ...

Given the fundamental direction of Japan's energy landscape, energy storage technology is set to play an integral part in Japan's energy future due to energy storage technology's role in both ...

Current Japanese laws and regulations do not adequately deal with energy storage, in particular the key

question of whether energy storage systems should be regulated as a "generator" or ...

Japan's energy storage policy is anchored by the Ministry of Economy, Trade and Industry (METI), which outlined its ambitions in the 6th Strategic Energy Plan, adopted in 2021.

ESN Premium's deep dive into Japan continues with a look at the complexities of an evolving market underpinned by strong drivers for energy storage.

With renewable energy accounting for 38% of the national grid (up from 22% in 2020), the island nation faces mounting pressure to stabilize its power supply. But how exactly does energy ...

ESN Premium's deep dive into Japan continues with a look at the complexities of an evolving market underpinned by strong drivers for ...

Japan's policy towards battery technology for energy storage systems is outlined in both Japan's 2014 Strategic Energy Plan and the 2014 revision of the Japan Revitalization Strategy.

The integration of renewable generation and energy storage in the power system has significant potential to mitigate undesirable characteristics of the power output such as intermittency and ...

In June, Japanese renewable energy developer Pacifico Energy put in action the first trades from battery energy storage system (BESS) assets in the country's power markets. ...
