Does 5G base station deployment optimization solve the problems of unreasonable deployment?

To solve the problems of unreasonable deployment and high construction costs caused by the rapid increase of the fifth generation (5 G) base stations, this article proposes a 5 G base station deployment optimization method that considers coverage and cost weights for certain areas in Kowloon, Hong Kong.

What is 5 G Technology?

Introduction With the rapid advancement of global communication technologies, fifth generation (5 G) networks have increasingly become the cornerstone of the information age (e.g., [1, 2]). Driven by 5 G technology, there has been an explosive growth in user numbers, which has raised higher demands for base station deployment.

Should 3.5 GHz be included in a 5G frequency band plan?

In addition, China, the EU and other major markets have clearly included 3.5 GHz in the first commercial 5 G frequency band planning, and the relevant frequency band division and interference management specifications are more complete, which can reduce the deployment risk.

Why is data volume demand increasing in 5G networks?

Data volume demand has increased dramatically due to huge user device increase along with the development of cellular networks. And macrocell in 5G networks may encounter sudden traffic due to dense users caused by sports or celebration activities.

This paper discusses the site optimization technology of mobile communication network, especially in the aspects of enhancing coverage and optimizing base station layout.

In this article, for optimizing the three-dimensional (3D) deployment of aerial-BSs for 5G mmWave networks, a classic deep reinforcement learning (DRL) network which named ...

This paper presents a novel compact low-profile dual-polarization base station antenna (or unit cell) designed for 5G mobile communications, which does not require ...

The utility model relates to a microwave radar and millimeter wave communication technology field, concretely relates to three-dimensional radar system of MIMO based on 5G basic station.

Given the shortcomings in 5 G base station deployment in this article, we propose a three-dimensional (3D) optimization scheme for deploying 5 G base stations at 3.5 GHz in ...

In this paper, we will analyze 3D beamforming properties and applications in wireless communications based on the physical structure of an array antenna, addressing the 3D beam ...

In this article, for optimizing the three-dimensional (3D) deployment of aerial-BSSs for 5G mmWave networks, a classic deep ...

In this paper, a GNSS/5G integrated three-dimensional positioning scheme based on D2D communication is proposed, where the time of arrival (TOA) and received signal ...

Oct 12, 2022 &#183; With the development of 5G technology, a convenient and fast emergency communication solution is needed when the local ground base station is unavailable for disaster.

In this paper, based on the GNSS observation data of the 5G smart communication base station, the quality of the original GNSS observation data of the 5G smart ...

Such connectivity must be reliable, secure, and supports high data rates, up to several hundred megabits per second (Mbps). The current commercial fifth generation (5G) base stations ...
