What generating stations does SRP operate?

SRP operates and participates in a number of major power plants and generating facilities in Arizona and the Southwest. These generating stations use fuel, steam and nuclear reaction to create energy. Learn about each generating station below. Arizona Falls is formed by a natural 20-foot drop along the Arizona Canal.

Where is Santan generating station located?

Plant construction began in 2001 and the plant began generating power in 2003. Located in Gilbert, Arizona, the Santan Generating Station is a mix of power generating units that are fueled by natural gas. It is owned and operated by SRP. Santan is able to responsively serve SRP's expected needs throughout the year.

Does SRP own a coal generating station?

SRP owns and operates this coal-fired generating station located near St. Johns, in eastern Arizona. It has a capacity of 762 MW, from one 382 MW-unit and one 380 MW-unit, and uses the Powder River Basin as a fuel source. Plant construction began 1975, with Unit 1 completed Dec. 31, 1979 and Unit 2 completed Oct. 1, 1980.

What is SRP's bolster substation battery system?

Adjacent to Agua Fria is the Bolster Substation Battery System, a 25 MW battery storage facility connected directly to SRP's energy grid. It can be discharged during peak energy periods to help meet high customer demand. It is SRP's largest stand-alone battery storage system in operation.

Coronado generating station (CGS), owned and operated by Salt River Project (SRP), is a 773MW coal-fired power station located near St. Johns, Arizona, US.

SRP has nearly 3,000 MW of carbon-free energy - including more than 1,400 MW of solar - currently serving its customers. SRP also has nearly 1,300 ...

Explore our portfolio to see how we're powering progress with cutting-edge energy storage solutions that enhance grid reliability, enable renewable ...

Coronado generating station (CGS), owned and operated by Salt River Project (SRP), is a 773MW coal-fired power station located ...

The Salt River Project is exploring the option to add a cutting edge energy storage system to the Coronado Generating Station site in St. Johns for ...

SRP is strengthening and preparing the grid for a future that's powered by renewable energy while maintaining the reliability we need to keep your family safe. SRP operates and participates in a ...

SRP has nearly 3,000 MW of carbon-free energy - including more than 1,400 MW of solar - currently serving its customers. SRP also has nearly 1,300 MW of battery and pumped hydro ...

But the St. John's Billion Energy Storage Center is about as basic as a spaceship next to a paper airplane. This megaproject aims to become Atlantic Canada's energy ...

SRP is seeking a non-lithium-ion, non-inverter based LDES technology as a pilot at its coal-fired Coronado Generating Station (CGS) ...

The Salt River Project is exploring the option to add a cutting edge energy storage system to the Coronado Generating Station site in St. Johns for power generated by the growing number of ...

"That impact is felt across the community even if you don't work there." In response to the upcoming closure, SRP and the St. Johns community began working together to diversify the ...

With the Coronado Generating Station slated to cease coal-fired energy production in 2032, the Salt River Project staff updated over 120 community members on the ...

The Salt River Project is exploring the option to convert a portion of the Coronado Generating Station in St. Johns into a cutting ...

Explore our portfolio to see how we're powering progress with cutting-edge energy storage solutions that enhance grid reliability, enable renewable integration, and drive long-term ...

The Salt River Project is exploring the option to convert a portion of the Coronado Generating Station in St. Johns into a cutting edge energy storage system for power generated
